

GMP LIMS Inc. Quality Assured for Less.

Installing a lab information management system can reduce quantitative costs and provide gains in efficiency and opportunity. GMP LIMS provides these benefits with significant savings to you.

You Gain

Improved lab efficiency
Reduced staff costs
Reduced lab errors

Our Solution is:

Affordable
Reliable – cloud based

Accessible – web based
Independent of other applications

Unlimited number of users
Customizable

When looking for a laboratory information management system (LIMS), there are many considerations – price, functionality, future growth, and impact on your laboratory processes.

A LIMS can provide robust features related to lab automation, reporting, billing and sample management. There are major cost savings with lab information management systems, ranging from a more efficient use of staff time to reduced need for server space and infrastructure costs.

In addition to the calculable costs, there's also the issue of new potential. One key advantage to installing a LIMS is the collective capacity gained by more efficient operations. This excess capacity can be used to bring in new business for your lab.

GMP LIMS will increase your laboratories

accuracy by significantly **reducing the risk of errors** related to manual entry of data, including errors related to transcribing data from bench sheets. In addition, we trace and consolidate these measurements into a single validated system.

Your **lab operations will be easier** with GMP LIMS. Consider some of the common areas of bottleneck in your lab: calculations, regulatory review preparation, results review and release, updating sample and test status, work assignments and workload leveling. We make these lab operations EASY.

GMP LIMS Inc. is a leader in serving the LIMS needs of small to medium size laboratories. We have consistently delivered effective LIMS solutions at a fraction of the cost of other LIMS vendors. Contact us to discover how we can reduce costs and improve efficiency in your lab.

GMP LIMS Inc. Quality Assured for Less.

Our solution provides the tools to make lab work easier. We enable your customers, analysts, lab managers and administration with tools to automate and optimize their workflow.

Your customers can easily login to your LIMS system and view their products and associated test specifications, ongoing projects and invoices. Finally they can submit a test order by creating an analysis requisition within the LIMS.

Your analysts have access to their test log, enabling them to easily view which tests have been assigned to them and when they should be started. They can easily input their test results, while all the changes they make are audited and available for viewing by the lab director.

Your lab managers have access to the Project Index, indicating all ongoing projects, and Test Index, where all outstanding tests and associated details are listed. This enables them to easily prioritize their work and allocate analysts accordingly.

Your lab director has access to all parts of the LIMS. The director can also restrict access by employees to certain parts of the LIMS, based on the employee's role. They can check the status of all projects and view who made what modifications and when. Our LIMS allows the director to know what's going on in her laboratory.

Your accounting department will have the ability to create quotes and invoices directly from the LIMS. They also have access to a searchable invoice log where they can filter and generate reports on the finances of your laboratory.

Your customer service, a vital part of any laboratory, can easily access project status and add notes or make modifications to project forms as required by customers.

Finally, your QA has access to all the information being generated in the lab in real-time. They can order re-tests, make

modifications to test results and issue a Certificate of Analysis within the LIMS.

Our LIMS system was created and is focused on small to mid size testing laboratories. We have the tools to make your work less stressful and much more efficient.

We're always open to suggestions and will be happy to engage with you to add customizations to fit your lab's unique workflow.
